

MOZAMBIQUE

Assessment of the Epidemiological Situation & Demographics	HIV/AIDS Impact on the Macroeconomic Level
<p><u>Estimated percentage of adults living with HIV/AIDS, end of 2001</u> These estimates include all people with HIV infection, whether or not they have developed symptoms of AIDS, alive at the end of 2001: 13%</p> <p><u>Estimated number of deaths due to AIDS</u> Estimated number of adults and children who died of AIDS during 2001: 60,000</p> <p><u>Estimated number of orphans</u> Estimated number of children who have lost their mother or father or both parents to AIDS and who were alive and under age 15 at the end of 2001: 420,000</p> <ul style="list-style-type: none"> • Mozambique is one of the nine African countries hardest hit by the HIV/AIDS epidemic. At the end of 2001, the Joint United Nations Program on HIV/AIDS (UNAIDS) estimated that 1.1 million Mozambican adults and children were living with HIV/AIDS, with an adult prevalence of 13%. • The number of cases is increasing, with the highest concentration in the center of the country, and the most rapid incidence of new cases occurring in the southern region. HIV prevalence among antenatal clinic attendees tested in the capital of Maputo increased from less than 1% in 1988 to 10% in 1998 and to more than 13% in 2000. • Most infections are concentrated along transportation and commerce routes, disproportionately affecting mobile populations (i.e., miners, migrant workers, traders, drivers, and uniformed services) and their partners. • By 2010, life expectancy at birth is expected to drop from 43 to 36 years, rather than increasing to 50 years. According to UNAIDS, approximately 30 to 40% of infants born to HIV-positive mothers will also become infected with HIV. By 2015, infant mortality in Mozambique, already among the highest in the world, is expected to be at least 25% higher than what it would have been in the absence of HIV/AIDS. • By 2010, an estimated 1.13 million Mozambican children will have lost one or both parents to AIDS, contributing to economic, social, and political instability. • HIV prevalence in young women is double that of men in the 15-19 years age group, and quadruple in the 20-24 years age group. 	<ul style="list-style-type: none"> • Using a computable general equilibrium modeling approach, it has been found that the Mozambican economy will be 14% to 20% smaller in 2010 on account of AIDS. Per capita GDP growth will be between 0.3% and 1.0% lower per annum. The main causes of the growth slowdown are reduced productivity growth, reduced population growth and human capital accumulation, and reduced physical accumulation. <p><i>Source: Channing Arndt "HIV/AIDS, Human Capital, and Economic Growth Prospects for Mozambique" Africa Region Working Paper Series No. 48 (February 2003), World Bank</i></p> <ul style="list-style-type: none"> • Studies suggest that patients with AIDS may occupy up to 20% of rural hospital beds, and the cost of caring for people living with HIV/AIDS will overburden the country's health care system. • At the same time, the health sector in Mozambique is not prepared for the HIV/AIDS epidemic. Mozambique has the lowest number of doctors per capita in Africa, and 46% of the primary health posts were destroyed by 1990 in the civil war. <p><i>Source: L. Bollinger, J. Stover "The Economic Impact of AIDS in Mozambique" (September 1999) The Futures Group International in collaboration with: Research Triangle Institute (RTI) and The Center for Development and Population Activities (CEDPA)</i></p> <ul style="list-style-type: none"> • Projections indicate that the number of economically active persons in 2010 will not be 12.4 million as previously expected, but less than 11 million, with a high proportion of very young or very old workers. • The Mozambican Education Ministry estimated that about 19,200 teachers and more than 100 senior education officials will die of AIDS, or of AIDS-related causes, between the years 2000 and 2010. <p><i>Sources: AEGIS News – September 21, 2001, United States Agency for International Development (USAID) HIV/AIDS in Mozambique – (2002)</i></p>
	<h3>HIV/AIDS Impact on the Private Sector</h3>
	<ul style="list-style-type: none"> • Mozambique is estimated to lose up to a third of its workforce by 2020, along with four other countries: Botswana, Namibia, South Africa, and Zimbabwe. <p><i>Source: Anne-christine d'Adesky, AmfAR's Treatment Insider Newsletter – January 2003</i></p>
<p><i>Sources: UNAIDS/WHO epidemiological fact sheet – Mozambique (2002), United States Agency for International Development (USAID) HIV/AIDS in Mozambique – (2002)</i></p>	

The National Response	Multisectoral Response																										
<ul style="list-style-type: none"> • In early 2000, the Ministry of Health approved a National Strategic Plan to combat Sexually Transmitted Diseases (STDs) and HIV/AIDS for 2000-2002. A National AIDS Council (NAC), chaired by the Prime Minister, was subsequently established to coordinate a multisectoral approach to preventing and controlling the epidemic, spearhead non-medical government efforts, and develop budgets and monitoring mechanisms. • The National AIDS Control Program (NACP), located in the Ministry of Health, is responsible for the nationwide health sector response to HIV/AIDS. The NACP: <ul style="list-style-type: none"> ○ Promotes and provides condoms, voluntary HIV/AIDS counseling and testing services, and treatment for Sexually Transmitted Infections (STIs) ○ Guides development and training in new protocols related to HIV, tuberculosis, and malaria ○ Provides training and materials to improve home-based care ○ Coordinates collection and analysis of improved prevalence data and ○ Supports an HIV/AIDS information hotline, managed by the Mozambique Network of AIDS Service Organizations (MONASO). • The National Strategic Plan to Combat HIV/AIDS and STIs, 2000-2002, identifies the following priorities for action: <ul style="list-style-type: none"> ○ Implementation of essential activities to reduce the impact of HIV/AIDS, aimed at orphans and people living with HIV/AIDS ○ Improvement of the quality and coverage of programs in youth-to-youth education, STI diagnosis and treatment, Voluntary Counseling and Testing (VCT), and treatment of opportunistic infections <div data-bbox="571 755 1003 1112" style="text-align: center;"> <table border="1" style="margin: 0 auto;"> <caption>New AIDS cases 1999-2010</caption> <thead> <tr> <th>Year</th> <th>Approximate New Cases</th> </tr> </thead> <tbody> <tr><td>1999</td><td>50,000</td></tr> <tr><td>2000</td><td>60,000</td></tr> <tr><td>2001</td><td>70,000</td></tr> <tr><td>2002</td><td>80,000</td></tr> <tr><td>2003</td><td>90,000</td></tr> <tr><td>2004</td><td>100,000</td></tr> <tr><td>2005</td><td>110,000</td></tr> <tr><td>2006</td><td>120,000</td></tr> <tr><td>2007</td><td>130,000</td></tr> <tr><td>2008</td><td>140,000</td></tr> <tr><td>2009</td><td>150,000</td></tr> <tr><td>2010</td><td>160,000</td></tr> </tbody> </table> </div>	Year	Approximate New Cases	1999	50,000	2000	60,000	2001	70,000	2002	80,000	2003	90,000	2004	100,000	2005	110,000	2006	120,000	2007	130,000	2008	140,000	2009	150,000	2010	160,000	<ul style="list-style-type: none"> • USAID provided \$6.6 million in HIV/AIDS assistance to Mozambique in FY 2001. In 2000, an estimated 364,000 persons were directly involved in USAID-supported HIV risk-reduction activities. Components of the USAID program include: <ul style="list-style-type: none"> ○ A nationwide condom social marketing program through Population Services International (PSI) ○ A workplace program, complemented by increased availability and quality of voluntary counseling and testing and sexually transmitted infection services ○ Collaboration with the Centers for Disease Control and Prevention and the Ministry of Health to expand HIV surveillance from five to 36 sites, to strategically disseminate improved data to audiences throughout the country, and to oversee standards for voluntary counseling and testing. • The World Bank, under the Multi-country HIV/AIDS Program (MAP), is providing \$55 million for Mozambique's HIV/AIDS Response Project. This project aims to assist the Government of Mozambique to finance the implementation of its national strategic plan to combat sexually transmitted diseases, and HIV/AIDS. • The Global Fund to Fight AIDS, Tuberculosis (TB) and Malaria announced on February 2003 a US \$54 million grant to support the country's national HIV/AIDS program. • Mozaal (an aluminum smelter) is spearheading the private sector's involvement in the fight against AIDS in the country. IFC Against AIDS supported in 2000 for US\$100,000 the continuation of an initiative undertaken by the Mozal Community Development Trust (MCDDT): an innovative awareness and prevention program in the community, reaching to 100,000 people; in 2003 in association with the Linkages Program of the World Bank's Small and Medium Enterprises (SME) department, IFC Against AIDS made an assessment to leverage the MCDDT's activities in the areas of 1) women health and 2) Voluntary HIV Counseling and Testing. <p style="text-align: right; font-size: small;">Source: USAID, HIV/AIDS in Mozambique (2002), The World Bank Multi-country HIV/AIDS Program (2002),</p>
